

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

The encapsulation of the book preview into a single factory function was okay as I created the function and called it.

2. What parts of encapsulating your logic were hard?

This encapsulation was not as difficult as trying to encapsulate other logic in the code base.

3. Is abstracting the book preview a good or bad idea? Why?

This logic is not reused in the code base again and so abstracting it is neither good nor bad.
